IP68 & NEMA 6P Protection

Hammond Manufacturing's water-tight polycarbonate enclosures are UL listed, Type 6P, and are designed to meet IP68. They're suitable for a variety of harsh environments:

- Silicone gasket provides protection in wet environments, including submersion.
- Polycarbonate is UV stabilized to withstand the effects of extended direct sunlight.
- Resists corrosion when exposed to an array of chemicals including many petroleum products.

A broad line of accessories is available including inner panels, pole mount kits, and a **brand new line of IP68 rated cord grips**.
