

Are you sure your emergency stop complies with the IEC safety standards?

Introducing Harmony XB4 and XB5, the trigger action emergency stops that simplify standard compliance.

Harmony XB4 and XB5: the 2-in-1 pushbuttons that cover emergency stop and emergency switching off functions

There are two types of emergency functions defined by the IEC® 60204 directive: emergency stop for safety applications, and emergency switching off for non-safety applications.

Knowing which one is right for your installation is not always easy.

To help you make the right choice, Schneider Electric™ introduces Harmony™ XB4 and XB5 22 mm trigger action emergency stops that combine both functions into one device.

Benefits at a glance:

Simplified ordering

- > One pushbutton covers the two emergency functions for compliance with current safety standards

Comprehensive range

- > Metal/plastic bezel (XB4/XB5)
- > Push/pull, turn to release, and key release in 30/40/60 mm
- > General safe stop functions for machine protection (XB5)
- > New 3D label for better visibility

Optimized inventory

- > One part number instead of two, saving space in your warehouse

Make the most of your energySM
