# Top 7 Ways TO BE EMERGENCY PREPARED!

- ✓ Designate a team to develop and implement an emergency plan. Run an evacuation test twice a year.
- ✓ Label all hazardous materials and post signs in areas that require protective equipment.
- ✓ Review machine back up power plans and have back-up power supplies on hand.
- ✓ Invest in LED lighting systems that use less power and are more reliable than conventional systems.
- ✓ Install emergency stop switches with features such as NEMA style, LED, and self cleaning contact mechanisms to operate efficiently in industrial environments.
- ✓ Keep a safety stock of batteries and chargers on hand.
- ✓ Use environmental and mechanical test equipment such as multifunction detectors for locating metal, voltage-carrying cables (AC voltage) and wooden beams, e.g. in walls.
